

IEA R&D Wind Task 28 Social Acceptance of Wind Energy Projects

Mobilising Social Acceptance: Learning from trans-national experience

- IEA Wind Task 28
- The aspects of social acceptance
- Good examples
- Further material

IEA Wind Task 28

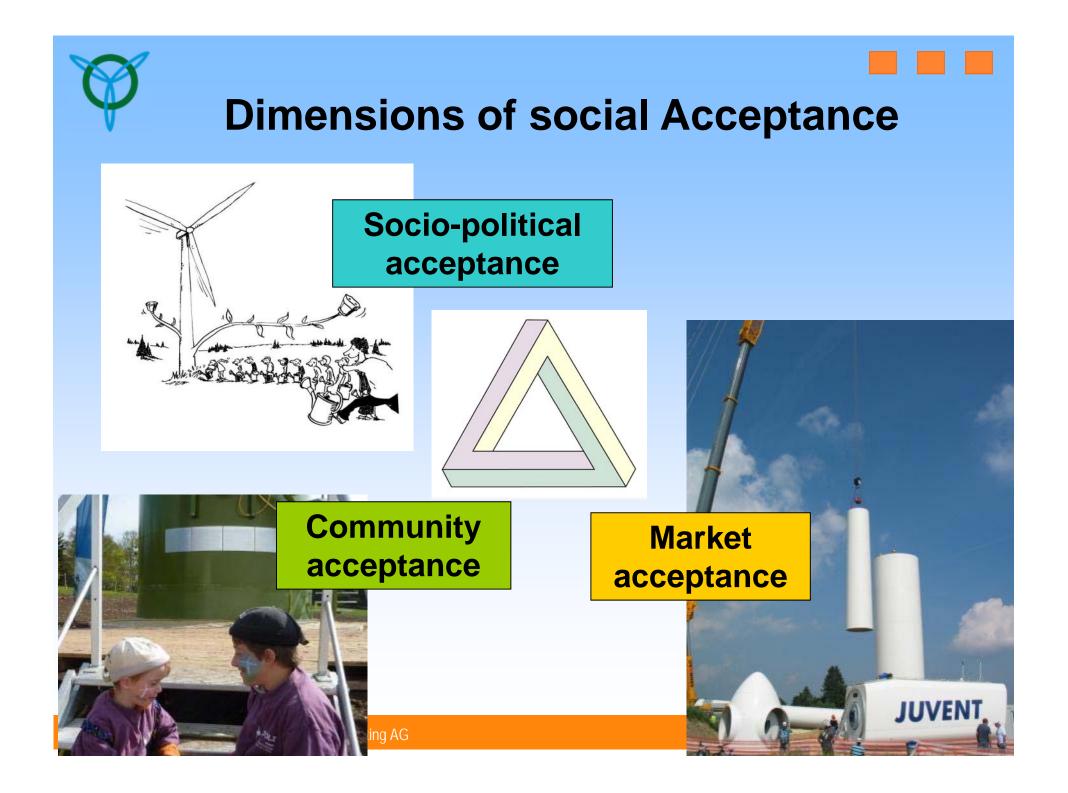

Work and results

- Establishment of an international forum with interdisciplinary background: from (social) scientists to engineers, practitioners and administration
- Regular exchange, connected to national expert meetings; Topical Expert Meeting 2007, 2012
- Translate research results of social scientists into language of planners and engineers

03.04.2013

Issues of social acceptance

Well-being

- Standard of living
- Quality of life
- Health, lights, noise & shadow flicker
- Valuation of ecosystems

Policy & Strategies

- National framework
- Incentive programs
- Spatial planning

Procedural design

- Regulatory requirements
- Fair and transparent processes
- The role of public engagement
- Respect of cultural history / local context

Distributional justice

- Ownership models
- Regional welfare
- Creation of win-win-situations

Implementation strategies

- Visualization
- Social marketing / communication
- Checklists / guidelines
- Practical application of scientific results

03.04.2013

Good Practice

 Wind energy has new and different impacts on the landscape and people in the neighborhood

- People's concerns have to be taken into account and their local knowledge should be used to improve the projects.
- There are successful strategies in many countries, in administration, communities, with project developers etc.
- Cross-country, interdisciplinary exchange is useful!

Dissemination in the various regions is necessary!

Ecosystems and landscape

Enabling wind energy in forests – finding solutions for nature protection

Create "new landscapes" - wind energy as an opportunity

Consulting AG

Distributional justice

Renewable Legislation Act 2008 to support local action and to address distributional questions

LOKALPLAN 05-001 VINDMØLLER, DRØSTRUP SKERPING August 2008

70% of the business tax to remain in the host communities of the wind farms

Educating influential citizens and giving them the spotlight to teach themselves: public forums inform about the various aspects of wind energy – information that people can spread in their communities

Implementation strategies

Development of local support, e.g. workshops

Generation of regional knowledge and experience exchange

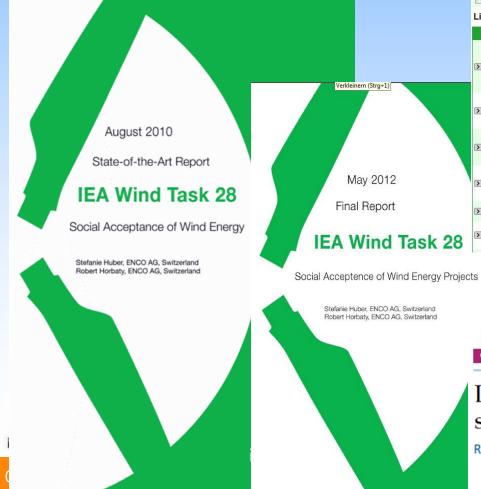

0

www.ieawind.org / Task 28

Overview

Large-scale wind deployment, social acceptance

Robert Horbaty, 1* Stefanie Huber^{2*} and Geraint Ellis^{3*}

The public is typically in agreement with the renewable energy targets established in many national states and generally supports the idea of increased reliance on

Conclusions

- The **importance of social acceptance issues** is increasingly recognised and implemented
 - Look at the local context, look for win-win-situations
 - Don't forget acceptance of transmission / infrastructure
- A lot of **research** is done to be **translated into practice**!
 - Good examples, experience exchange
 - Checklists & guidelines
- **Open issues** that have not been tackled yet in-depth:
 - «Monitoring of social acceptance»
 - Strategies to turn affected people into involved parties

New issues come up regularly that have to be discussed (species being endangered by wind power, repowering)

IEA Wind Task 28 Thank you for the attention!
